Subject: Silas release notes V3.10.0.0

Dear Silas user,

Silas V3.10.0.0 is now available. This release contains updated versions of both Silas Acquisition (V3.10.0.0) and Silas Processing (V3.9.0.0). Several bugs fixes have been made and issues resolved, Stema has also added new functionalities to this release. If you currently have an active maintenance contract, you can download the release using the following button.

**DOWNLOAD SILAS V3.10.0.0**

If you currently are not in possession of a maintenance contract and would like to have information about this maintenance program you can contact our sales department ([sales@stema-systems.nl](mailto:sales@stema-systems.nl)).

The main new developments of this release are:

- Prj-files are associated with Silas Processing
- New feature: color bar indicating the color scale of the trace window display
- Color of layers can be changes from the status bar
- Ensemble coordinates of SEG Y can be selected upon import of generic SEG Y file
- New SEG Y export format added
- Unsaved contacts will result in a warning upon closing the project (contact module)
- Multiselect is enabled in the export wizard
- Layers can be exported in time (ms)
- Added possibility to export trace number in export wizard
- Scale line used in picture outputs also available when depth settings are in feet
- Layers can be deleted from the navigation window
- Bug fix in time shift when using position data from an XYD-file
- Bug fix in display of trace window when using 'Distance mode'

If you have any questions, feedback or inquiries for developments to be made, please inform us as we would gladly try and take this into account for our next release.
