Subject: Silas release V3.9.4.1

Dear Silas User,

We are pleased to announce the new release of the Silas sub-bottom profiling software. This release contains the latest version of both Silas Acquisition (V3.9.4) and Silas Processing (V3.8.8).

The new developments of this release are:

#### **Silas Acquisition: V3.9.4**

- Improved Trace Window Settings

#### **Silas Processing V3.8.8**

- New features:
  - Information Window
  - Zoom Window
- Groundtruth data:
  - Boreholes, Rheotunes, and CPT's can be drawn with transparent background
  - Possible to draw boreholes on multiple lines
  - Improved borehole labels
  - Boreholes can be loaded automatically
- Trace window display:
  - Default display settings
  - Orientation of the seismic lines can be reversed
  - Seismic profile can be displayed using horizontal distance
  - Horizontal axis of seismic profile can be scaled by selecting traces/pixel or mm/pixel
- Saving Images
  - Possible to copy charts, navigation map, detail map, and the visible part of the seismic profile to the clipboard
  - Restored functionality of HTML figure: the depth and coordinates are shown on mouse-move
  - Possible to add horizontal scale line to image
- New keyboard short keys
- New export option to reduce the amount of traces
- TVG Amplification: additional parameters can be set (Object detection)
