Subject: RheoTune Software release notes V2.6.6.0

Dear RheoTune user,

This release contains the latest version of the RheoTune software (V2.6.6.0), encompassing updates of RheoLog, RheoEdit and RheoCal. To be able to use this software you require a maintenance contract for your respective license. If you would like to have information about this maintenance program and how to obtain this for your license then we would invite you to contact our sales department (sales@stema-systems.nl).

Every RheoTune is subject to an individual installation. If you should wish to have an installer that contains the specific calibration files of your tune, please contact Stema Systems at support@stema-systems.nl. If you have changed your calibration files, we ask that you please make sure to have a back-up before the installation is executed.

The highlights of the new RheoSuite release are:

RheoLog:

- Position is now logged for each sample.

RheoEdit:

- Position information added to Data Records window.
- File position can be updated based on sample position information.
- Added Navigation map with option to load DXF files.
- Fixed bug where set file wouldn't open immediately after creation.
- Improved header of level exports.

This update also contains some minor bug fixes and user interface and experience improvements.

We would welcome any and all feedback that you might have, also if you have any questions or inquiries for developments to be made, please contact us at support@stema-systems.nl and we will gladly try and take this into account for our next release.

Best Regards,

Stema Systems
